

# What's New in Docker Desktop 4.15

Dec 15 2022

# Speaker

- Working at Docker, Inc
- Author @ <https://collabnix.com>
- Docker Captain
- Docker Community Leader, Bangalore
- ARM Innovator
- Worked @ DellEMC, VMware, Redis & CGI

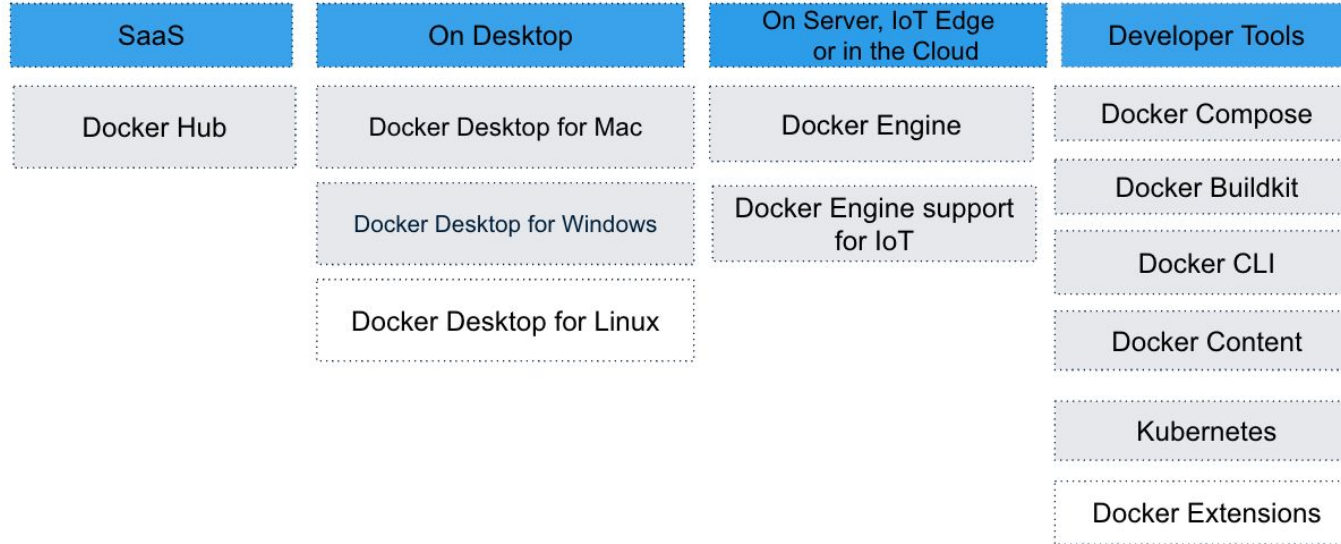

## Agenda

- What's New in Dev Environments?
- New Dev Environments CLI
- New Chrome Extensions for Dev Environments
- Docker + WebAssembly Awesomeness
- New Hub Search Capabilities
- New Docker Extensions

# Docker Overview

# Features of Docker Desktop

Dev Environments

Docker Extensions

Support for  
Containerd

Vulnerability  
Scanning

Support for Wasm  
Containers

Support for  
Kubernetes

# Dev Environments

# A Traditional Docker Workflow

BUILD

SHARE

RUN

\$ Clone Repo

\$ Install Docker

\$ docker compose up

## Challenges in the traditional approach

- Developers need to manually download all the tools to setup their development environments.

For Ex:

- VS Studio software/IntelliJ
- GitHub/Plugins

## Dev Environments [Give feedback](#)

Create 

Create a configurable developer environment with all the code and tools you need to quickly get up and running. [Learn more](#)

### Define. Distribute. Iterate.

Define your project's configuration as code, distribute your project easily amongst your team, and have everyone work on the same code and any dependencies with one click.

Create a new environment

Or try running a sample...

Run a single container ▶

Run a microservices container ▶

## New Features & Enhancements:

- New Dev Environments CLI
- Dev Environments allow cloning a Git repository to a local bind mount, so you can use any local editor or IDE.(and not just Visual Studio Code)
- New Chrome Extension
- Deploy app directly from Awesome Compose Repository
- Improvements: Custom names, Better private repo support

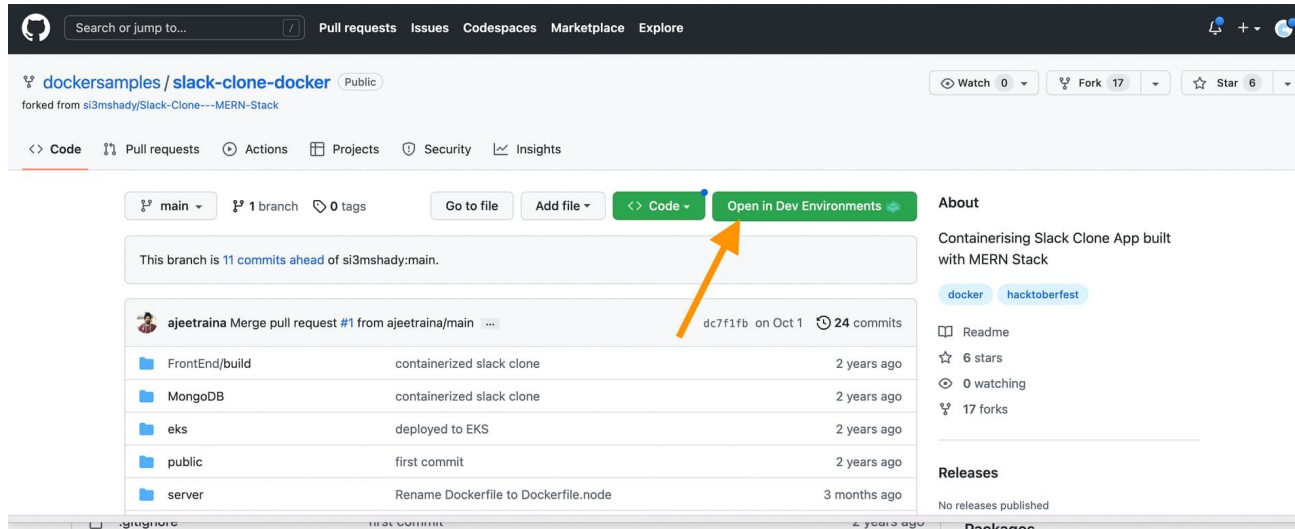

# A Quick Demo

<https://github.com/docker/awesome-compose>

# New Chrome Extension for Dev Environments

The screenshot shows the GitHub interface for the repository `dockersamples/slack-clone-docker`. The repository is public and forked from `si3mshady/Slack-Clone---MERN-Stack`. It has 0 watches, 17 forks, and 6 stars. The repository is on the `main` branch, which is 11 commits ahead of the upstream `main` branch. The repository description is "Containerising Slack Clone App built with MERN Stack". The repository is tagged with `docker` and `hacktoberfest`. The repository has 6 stars, 0 watching, and 17 forks. The repository has no releases published. The repository has a `Readme` file. The repository has a `server` directory with a commit message "Rename Dockerfile to Dockerfile.node" 3 months ago. The repository has a `public` directory with a commit message "first commit" 2 years ago. The repository has a `eks` directory with a commit message "deployed to EKS" 2 years ago. The repository has a `MongoDB` directory with a commit message "containerized slack clone" 2 years ago. The repository has a `FrontEnd/build` directory with a commit message "containerized slack clone" 2 years ago. The repository has a `server` directory with a commit message "Rename Dockerfile to Dockerfile.node" 3 months ago. An orange arrow points to the `Open in Dev Environments` button.

# New Dev Environments CLI

```
% docker dev

Usage: docker dev [OPTIONS] COMMAND

Docker Dev Environments CLI interface

Options:
  -s, --socket string  Sets the path to the unix socket or pipe to be
                        targeted. Can also be set through the environment
                        variable DOCKER_DEV_ENVS_SOCKET_PATH
  -v, --version        Display version of the dev plugin

Management Commands:
  service             Service management on a dev environment

Commands:
  check              Check Dev Environments
  create             Create a new dev environment
  list               Lists all Dev Environments
  logs               Traces logs from a dev environment
  open               Open Dev Environment with the IDE
  rm                 Removes a dev environment
  start              Starts a dev environment
  stop               Stops a dev environment
  version            Show the Docker Dev version information

Run 'docker dev COMMAND --help' for more information on a command.
unknown docker command: dev []
```

## Create a Dev Environment

Overview

2

Setup

3

Preparing

4

Ready

### Name

Visitor App

A random name is generated if you do not provide one.

### Choose source

Existing Git repo

Local directory

`https://github.com/docker/awesome-compose/tree/master/flask-redis`

Create a fresh clone of a Git repository from an HTTPS or SSH URL. Pull Request URLs are also supported.

### Choose IDE

Visual Studio Code

Other

The Git repository is cloned into a Volume and attaches to your containers so that you can develop directly inside of them using Visual Studio Code.

# Docker + Wasm

- Docker Desktop 4.15 added [WebAssembly capabilities](#).
- Use with the [containerd integration](#).

The screenshot shows the Docker Desktop settings window. On the left is a sidebar with navigation items: General, Resources, Docker Engine, Kubernetes, Software updates, Extensions, and Features in development (which is highlighted). The main content area is titled 'Features in development' and has two tabs: 'Beta features' (selected) and 'Experimental features'. A light blue banner at the top of the 'Beta features' tab contains an information icon and the text: 'Beta features can be discontinued without notice. [Learn more](#)'. Below this, a paragraph explains that beta features are initial releases of potential future features and that users can provide feedback. The 'Use containerd for pulling and storing images' feature is checked with a blue checkbox. A black arrow points from this checkbox down to the 'Ability to run Wasm containers' bullet point. Below the checkbox, a description states: 'Turns on the experimental containerd image store. This brings new features like: performance by lazy-pulling images.' Two bullet points follow: 'Faster container startup performance by lazy-pulling images' and 'Ability to run [Wasm containers](#)'. At the bottom, a warning triangle icon is followed by the text: 'Only images and containers in the active image store are visible. All your other containers and images still exist. To see them again, turn off this feature.'

**Features in development**

[Beta features](#)   Experimental features

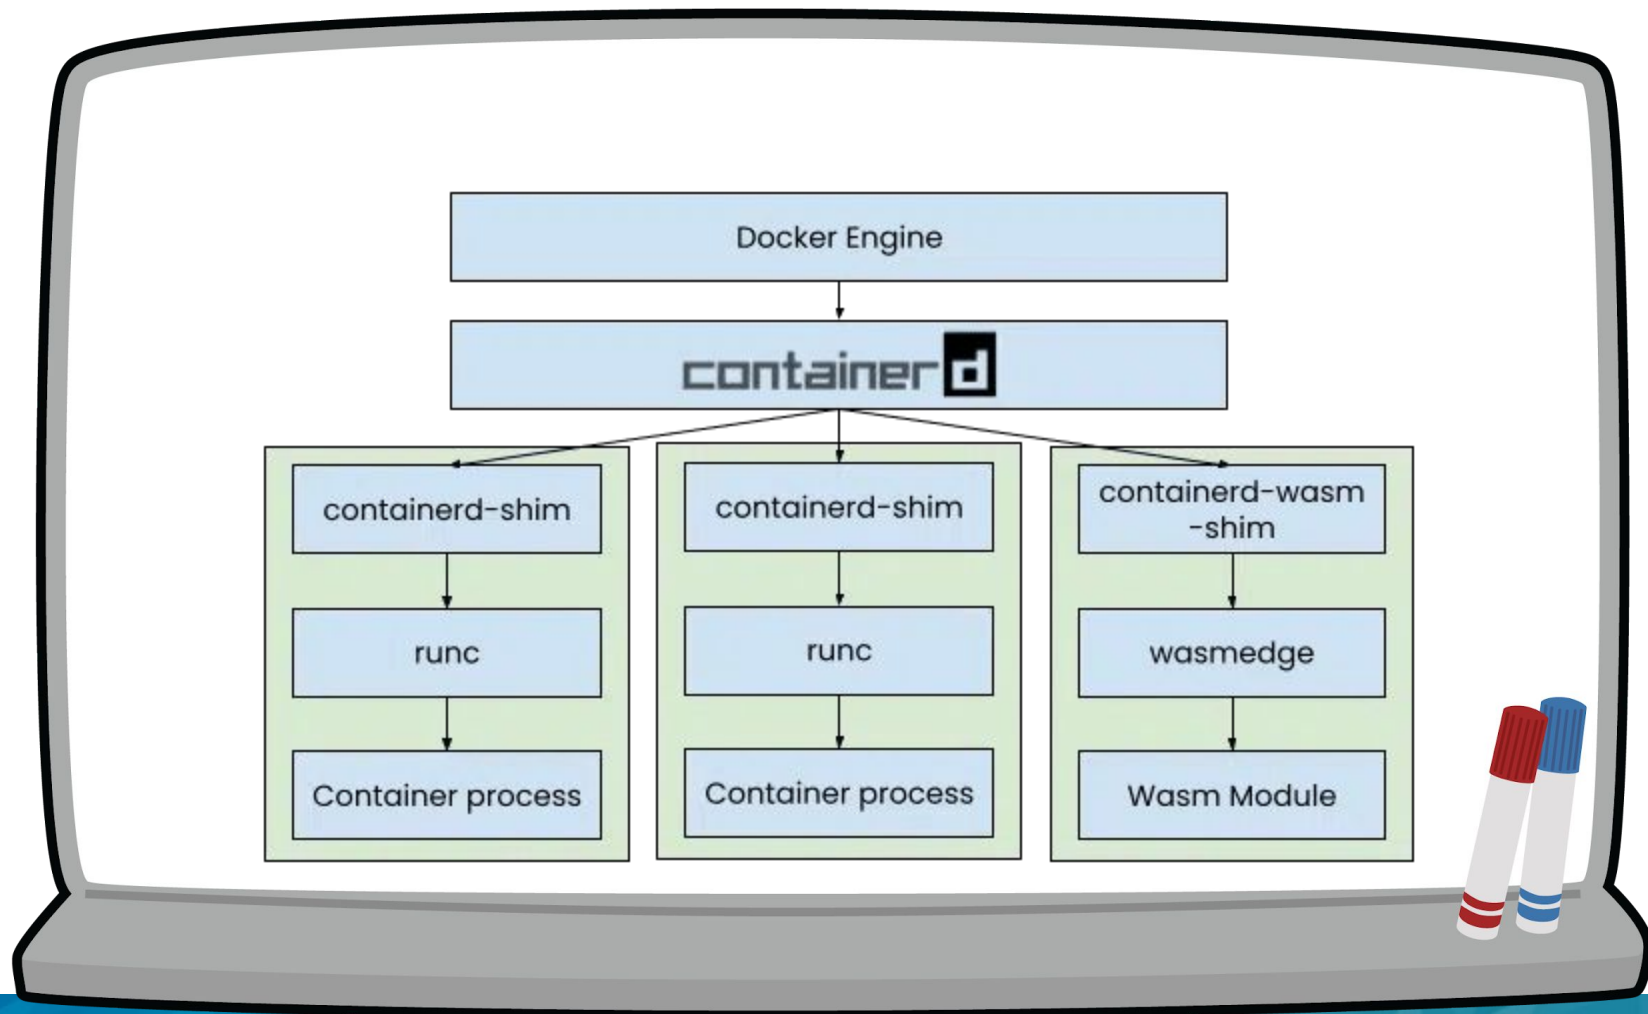

**Beta features**

**Use containerd for pulling and storing images** [Give feedback](#)

Turns on the experimental containerd image store. This brings new features like: performance by lazy-pulling images.

- Faster container startup performance by lazy-pulling images
- Ability to run [Wasm containers](#)

⚠ Only images and containers in the active image store are visible. All your other containers and images still exist. To see them again, turn off this feature.

- Docker Desktop 4.15 added [WebAssembly capabilities](#).
- Use with the [containerd integration](#).
